### Comparing the Laddermill® to a Jacob's Ladder®

Behind every Laddermill there is Brewer Fitness's 28+ years' experience and customer support. Our years of focusing on vertical movement, self-paced climbing and engaging the mind and body together separate the Laddermill from other ladder-type fitness equipment. It is truly different class of equipment. The following is a sample comparison.

Laddermill®	Jacobs Ladder®
Vertical, natural climbing movement	Single position
Laddermill users enjoy natural, vertically oriented movement, at varying angles for any experience or ability.	Users use a single, bear crawl position.
Multiple angles	Fixed angle
Laddermills have <b>adjustable angles</b> , +12 to -14 degrees, key to training.	Jacobs ladder is <b>fixed angle</b> , +40-degree angle.
Stepper/Climber options	One mode only
Laddermills can be used as a full-on climber, upper-body trainer, or a stepper with hand rails (weight fully on legs).	The Jacobs Ladder has one mode of crawling with four points of weight bearing contact.
No harness	Harness required
Users just get on and climb. <b>No harness.</b>	Users must <b>put on a harness.</b>
User adjusted speed	Harness controlled speed
Users adjust speed/resistance with a lever and the ladder brakes when your feet reach the bottom. The speed/resistance is set independently for training purposes.	Speed and braking depend on the harness and user's position. The speed cannot be set to a pre-determined.
Visual Impact	Visual Impact
These are striking, vertical additions to a training area. Eye-catching.	This is smaller, typical looking equipment.
Quality - Warranty	Quality - Warranty
6 years warranty	4 Years warranty
