

## Product Choices/Changes – April 2019

Many of our familiar products have undergone design changes. We updated the Treadwall (new "FT" series) and added a larger option for the Boulderboard. The following is a quick guide.

### **Treadwall®<sup>FT</sup> Line**

We now offer a **full line that has three options** (frame, width and height) that you combine to meet any space or budget.

- Base and Pro Packages will be offered.
- Frame color will change to dark grey.
- Panel materials will be natural wood.

#### **1. Frames:**

**Max Frames** – *Maximum* frame, with full +10 degrees (slab) **to -35 degrees** (overhanging) angles: range required for climbing-focused training and more intense training.

**S Frames** – *Standard* frame with +10 degrees (slab) **to -15 degrees** (overhanging) angles: same angle range as the previous M6 Pro, minimal footprint with great training angles.

**V Frames** – *Vertical only* frame, **no angle adjustment**, located against a wall for absolute minimal footprint.

**Kore Frames** – These are **residential only** units, using the same frames as in the previous Kore series. Any non-residential use will void the warranty.

#### **2. Width:**

**Six Feet wide** – Full width climbing, same as the M6 series previously made

**Four feet wide** – smaller footprint, same as the M4 series previously made

#### **3. Height:**

**10-foot wall** – The lowest option for ceiling height issues.

**11-foot wall** – The standard height, same as the previous M6 and M4 Pro models.

**12-foot wall** – The largest wall option, helpful for climbing focus. (n/a on V and Kore frames)  
This is the same size as on the previous Kore Pro.

#### **Models will have the following types of names:**

The S frame, 4 feet wide with an 11-foot wall = **S4/11**

The Max frame, 6 feet wide with a 12-foot wall = **Max6/12**

A V frame, 4-feet wide and a 10-foot wall = **V4/10**

A home Kore unit, 6-feet wide, 11-foot wall = **Kore6/11**

Orders specifying existing models will be filled with the equivalent new, upgraded model.

### **Laddermill® Ascender Line**

The Laddermill will remain the same.

- No Base or Pro options: there is one product, model LM-1.
- Frame color will change to dark grey.

**Continued next page**

## **Boulderboard® Training Stations**

The Boulderboard **will now have two versions**: a 4-foot version we currently make and a new 6-foot version. The top pull-up bar is re-designed to a sleeker version. On the base version, the tee nuts will be inserted by the customers.

- Base and Pro Packages will be used.
- Frame color will change to dark grey.
- Panel materials will be natural wood.

### **Frames:**

**4-foot Wide Frame** – Climbing surface is 4-feet wide by 10-feet long – no change.

**6-foot Wide Frame** – Climbing surface is 6-feet wide by 10-feet long - New 2019.

## **Ledgewall™ Climbing panels**

The panels **remain the same** with one key change: a much higher quality tee nut is now used that is far better than anything before. This means minimal cross threading and easier use when locating holds.
